Non-ERP → Decentralized System

Sales department Selling/Marketing Capture all the customer information	Material Management These people will procure(Buy) the raw material required for manifestoing	Production Planning Manufacturing / Assemble	Logistic Department Deliver the products to the customer	Accounting Department Billing to customer / Paying Vendor

Since each department will have it's application and it's won DB. Information should pushed manually. Passing manually across the department leads error prone. It consume more time. W e can't built online tracking application

DB	DB	DB	DB	DB

Customer: Who will purchase a product – 1000 → Sep 15

Vendors: Who will supply the product

ERP - Centralized system

| Sales department Selling/Marketing Capture all the customer information | Material Management These people will procure(Buy) the raw material required for manifestoing | Production Planning Manufacturing / Assemble | Logistic Department Deliver the products to the customer | Accounting Department Billing to customer / Paying Vendor |

We can use the data that is available in the system for organization benefits

R – Real Time data exchange. We can also build online tracking application which will tell us how many raw material are available in a company premise and how many products we can manufacture and when we can delivery

DB

ERP ☐ Enterprise Resource Planning

I 10 – 1000   -- 100000

I 20 – 100000 -- 10000

Venna – 30000 -- 2000

Creta – 50000   -- 5000

E – Enterprise
Any Organization which runs business Manufacturing, Oils & Gas, Pharma Ect…

R – Resources
Humans, Machine, Money, Land ect…

P – Planning
We need have proper plan to run business smoothly
